

Rye Harbour Car Park Data Summary 2001 – 2014

This summary has been prepared by Dr Barry Yates of Sussex Wildlife Trust from data supplied by ESCC derived from their equipment installed at the entrance to Rye Harbour Car Park.

The hourly counts supplied represent vehicles crossing the entrance and so each count can represent a car entering or leaving. The numbers represented in this report are half of the total counts so represent cars entering the car park.

There have been some periods when the recording has failed (highlighted in yellow in the table) and we have filled the gaps with figures representative of the time of year and the days of the week.
